

Paladin Healthcare and Ferno have combined decades of experience to create an unparalleled combination of products. Flexibility, adaptability and expandability in all conditions and clinical applications.

Both companies independently developed component based storage solutions for medical supplies and equipment that improve flexibility, ergonomic organization, efficient infection control and optimized supply utilization. Through this partnership, Paladin Healthcare and Ferno will integrate and streamline pre-hospital and in-hospital equipment supply storage and equipment management.

Paladin has collaborated with Ferno to adapt the iNfTRAXX™ Integrated Vehicle Component System for in-hospital implementation. iNfTRAXX™ features quick release mounts that secure equipment such as oxygen cylinders, monitors, defibrillators and supply bags to tracks installed on the walls of an ambulance.

Ferno and Paladin Healthcare are partnering to transform the work environment in ambulances and healthcare facilities. Safe, durable, and flexible solutions adapted to the needs of a caregiver are the future which healthcare professionals can look forward to.
