

CHALLENGE:

The dangers of contagious infectious disease are very costly problems that can have deadly results. With or without a rail system, if the walls are not stripped bare of all their elements, infectious diseases have places to hide. This method is unacceptable.

SOLUTION:

Experts agree that the best Terminal Cleaning Solution requires bare walls, and the use of an automated aerosolized EPA registered Hospital Disinfectant like the Paladin BioDefense Decontamination System.

True Terminal Cleaning is only possible with the ability to remove ALL equipment and materials from the walls without leaving holes in the walls, without cleaning around wall mounted items, without leaving places for infection to hide.

If you can not paint behind it, you can not clean behind it.

True Terminal Cleaning looks like this.
