## Mount Any Welch Allyn Diagnostic Tool On Paladin's Equipment Management Rail

### LIFECYCLE FLEXIBILITY AND COST REDUCTION

#### CHALLENGE:

Contracts change, technology changes, process needs change. The only constant is the building infrastructure.

#### SOLUTION:

Install the Paladin "Evolution" Equipment Management Rail System and provide built-in flexibility for lifecycle changes.

### VALUE PRESERVATION

#### CHALLENGE:

Reducing ongoing Operational Expenses. Traditional methods for mounting equipment involves damage to wall surfaces resulting in costly room downtime and the expense of time consuming repairs.

#### SOLUTION:

Installing an equipment rail system preserves the infrastructure of the facility by reducing the endless repair of damaged walls, and it provides the added benefit of allowing users to easily reconfigure their workspace when change is necessary or desired. With a full array of GCX, power supply, cord, and cable management rail tools, equipment can be effortlessly moved and neatly reorganized for optimized patient care.
